

LCH-IV International Collaborative Treatment Protocol for Children and Adolescents with Langerhans Cell Histiocytosis

Estado Fin Reclutamiento	Tipo de Participantes Sujetos incapaces de otorgar consentimiento	Rangos de Edad Menores de 18
Género Ambos	Fases Fase II , Fase III	Participantes esperados 2030
Resultados Sin resultados	Bajo nivel intervención No	Enfermedad rara Si
Cobertura geográfica Multicéntrico internacional	Ámbitos del ensayo diagnóstico, tratamiento, eficacia	Terapia avanzada NO

Información

Identificador 2024-512676-36-00 (CTIS)	Cod. Protocolo 042011
--	---------------------------------

Transicionado 2011-001699-20

Área terapéutica
Enfermedades [C] - Cáncer [C04]

Enfermedad investigada
Langerhans Cell Histiocytosis

Título Científico
LCH-IV International Collaborative Treatment Protocol for Children and Adolescents with Langerhans Cell Histiocytosis

Justificación

No aportado

Objetivo Principal

Reduction of mortality in multi-system (ms)-LCH by early switch to salvage treatment of patients with risk organ involvement and without response to 1st-line therapy.

Randomized investigation of prolongation or intensification of continuation therapy to reduce reactivations and late sequelae in ms-LCH.

Randomized investigation to reduce reactivation rate, late sequelae by prolongation of continuation therapy (6 vs. 12 m) in single-system (ss)-LCH with isolated "CNS-Risk" lesion or multifocal bone (mfb) lesions.

Investigation to achieve disease resolution, prevent reactivations, late sequelae in non-risk organ involvement patients with 2nd-line treatment (PRED/ARA-C/VCR) for 24 weeks followed by continuation therapy (Indomethacin vs. 6-MP/MTX) for 24 months in total.

Variables de Evaluación Primaria

Reactivation-free survival

Overall and disease free survival

To study the course of neurodegenerative CNS-LCH

Response of isolated tumorous CNS lesions to 2-CdA

Rate and spectrum of permanent consequences

Momentos temporales de evaluación primaria

No aportado

Objetivo Secundario

To validate prospectively a new scoring system for disease activity and treatment response assessment.

To investigate the cumulative incidence of radiographic and clinical neurodegeneration in patients with "CNS-Risk" bone lesions and endocrine deficits.

To study the natural history of LCH in patients not needing upfront systemic therapy and the long-term consequences and quality of life of all registered (with and without systemic therapy) patients.

Variables de Evaluación Secundaria

Incidence of permanent consequences

Toxicity of treatment

Proportion of patients alive and free of disease without permanent consequences

Cumulative incidence of reactivations in risk organs

Momentos temporales de evaluación secundaria

No aportado

Criterios de Inclusión

Histological verification of diagnosis of LCH Age < 18 years No prior systemic therapy Signed informed consent Met inclusion criteria for respective stratum

Criterios de Exclusión

Pregnancy
Prior systemic therapy
Missing signed consent form
LCH related permanent consequences

Diseases [C] - Cancer [C04]

Investigated Disease
Langerhans Cell Histiocytosis

Scientific Title
LCH-IV International Collaborative Treatment Protocol for Children and Adolescents with Langerhans Cell Histiocytosis

Rationale

Not provided

Main Objective

Reduction of mortality in multi-system (ms)-LCH by early switch to salvage treatment of patients with risk organ involvement and without response to 1st-line therapy.

Randomized investigation of prolongation or intensification of continuation therapy to reduce reactivations and late sequelae in ms-LCH.

Randomized investigation to reduce reactivation rate, late sequelae by prolongation of continuation therapy (6 vs. 12 m) in single-system (ss)-LCH with isolated "CNS-Risk" lesion or multifocal bone (mfb) lesions.

Investigation to achieve disease resolution, prevent reactivations, late sequelae in non-risk organ involvement patients with 2nd-line treatment (PRED/ARA-C/VCR) for 24 weeks followed by continuation therapy (Indomethacin vs. 6-MP/MTX) for 24 months in total.

Primary Endpoints

Reactivation-free survival

Overall and disease free survival

To study the course of neurodegenerative CNS-LCH

Response of isolated tumorous CNS lesions to 2-CdA

Rate and spectrum of permanent consequences

Temporary moments of secondary assessment

Not provided

Secondary Objective

To validate prospectively a new scoring system for disease activity and treatment response assessment.

To investigate the cumulative incidence of radiographic and clinical neurodegeneration in patients with "CNS-Risk" bone lesions and endocrine deficits.

To study the natural history of LCH in patients not needing upfront systemic therapy and the long-term consequences and quality of life of all registered (with and without systemic therapy) patients.

Secondary Endpoints

Incidence of permanent consequences

Toxicity of treatment

Proportion of patients alive and free of disease without permanent consequences

Cumulative incidence of reactivations in risk organs

Temporary moments of secondary assessment

Not provided

Inclusion criteria

Histological verification of diagnosis of LCH Age < 18 years No prior systemic therapy Signed informed consent Met inclusion criteria for respective stratum

Exclusion criteria

Pregnancy
Prior systemic therapy
Missing signed consent form
LCH related permanent consequences
